Autonomous systems-minded statistics undergraduate with interests in Data Science, Robotics, and Computer Vision. Perception member at METU Formula Racing focusing on real-time detection and sensor fusion (LiDAR/RADAR). Experienced with Python, R, C++, OpenCV, YOLO, and ROS; comfortable building data-driven solutions from exploration to deployment.

EDUCATION

Middle East Technical University (METU)

B.Sc. in Statistics

Ankara, Turkey

2023 – Present

TECHNICAL SKILLS

Programming Languages: Python, C++, R, Java, MATLAB

ML & Data Science: PyTorch, Scikit-Learn, OpenCV, YOLO, SQL, Pandas, NumPy, Matplotlib

Autonomous Systems: ROS, Sensor Fusion (LiDAR/RADAR), MAVLink, QGroundControl, PX4, AirSim

Developer Tools: Git/GitHub, Docker, Linux (Ubuntu), VS Code, Qt Framework

EXPERIENCE

Software Engineer Intern

Eper Technology

Dec 2025 – April 2026

Ankara, Türkiye

- Contributed to the development and customization of the open-source **QGroundControl** station for UAVs.
- Utilized **C++** and **Qt Framework** to optimize GUI components for specific mission planning requirements.
- Analyzed telemetry data via the **MAVLink** protocol to ensure stable communication between ground stations and autonomous systems.

AI Software Engineer Intern

Baykar Teknoloji

Jul 2025 – Sep 2025

Baku, Azerbaijan

- Developed and tested algorithms for LiDAR and Visual-Inertial Odometry to enhance autonomous systems.
- Integrated DNN-based tracking methods, including SuperGlue, to improve perception capabilities.
- Gained practical experience with Unreal Engine, AirSim, PX4, and ROS for UAV simulation and data collection.

AI Engineer Intern

C4IR Azerbaijan

May 2025 – Aug 2025

Baku, Azerbaijan

- Designed and deployed machine learning models for time-series forecasting, utilizing ARIMA and Prophet methodologies.
- Implemented statistical diagnostics and backtesting frameworks to ensure model accuracy and reliability.
- Collaborated with cross-functional teams to enhance data-driven decision-making processes.
- Contributed to the innovative environment at 4SiM Azərbaycan / C4IR Azerbaijan, a forward-thinking startup focused on AI solutions.

Autonomous Systems Team Member

METU Formula Racing

Feb 2025 – Dec 2025

Ankara, Turkey

- Developed traffic-sign detection with YOLOv8; real-time object detection/classification.
- Processed sensor data and integrated sources via ROS; contributed to LiDAR/RADAR fusion.

SELECTED PROJECTS

- Exploratory analysis and visualization using Pandas/Matplotlib on public datasets.
- Object detection & classification pipelines with OpenCV and YOLO.
- ML models leveraging statistical methods with reproducible notebooks.
